

This infographic introduces the biggest Egyptian pyramid: The Great Pyramid of Giza. Since the main colour tone of the Egypt deserts and the pyramid is orange, a bright orange is used as the main colour theme of the whole graph. The infographic includes some basic information of the pyramid such as the materials used to make the pyramid as well as the height and base of it, which are used to calculate the area and the volume later on. At last, there is a part where a real life photo the pyramid is pasted and some geometric features (3D shapes) are introduced in the graph.
