

Mathematics Project Competition (2023/24)

數學專題習作比賽 (2023/24)

Information Sheet 資料頁

Category 參賽組別	<input checked="" type="checkbox"/> * A 組：初中習作 (Category A: Junior secondary project) <input type="checkbox"/> * B 組：中一小型習作 (Category B: S1 mini-project)			
Title of Project 專題習作題目	Incenters and Inspheres of Tetrahedrons			
Name of School	Wah Yan College, Kowloon			
學校名稱	華仁書院 (九龍)			
Team members 隊員		Name in English	中文姓名	Class 班別
	1	Chung Ngo Yin Adrian	鍾遨然	3W
	2	Kam Hing Tong	甘慶棠	3W
	3	Wong Hui Lok	黃栩洛	3W
	4	Law Lok Hang	羅樂珩	3Y
	5	Lee Man Hei Joshua	李文希	3Y
	6	Shum Yat Yin	沈一言	3Y

Mathematics Project Competition for Secondary Schools 2023/24

Title: Incenters and Inspheres of Tetrahedrons

Wah Yan College, Kowloon

Content

1.	Introduction	P.3
2.	From 2-D to 3-D: Constructing the circumcenter of a tetrahedron by the circumcenters of its faces	P.4
3.	Can we locate the incenter of a tetrahedron by the incenter of its faces?	P.15
4.	Locating the incenter of a tetrahedron by 3-D trigonometry	P.24
5.	Constructing tetrahedrons with given insphere	P.35
6.	Making 3-D models of tetrahedrons with given insphere through GeoGebra Augmented Reality (AR)	P.47
7.	Summary	P.61
8.	References	P.62

1. Introduction

In Form 3, we have learnt the perpendicular bisector property and angle bisector property, and we learnt how to apply these properties to construct the circumcenter and incenter of triangles.

Meanwhile, we know that there is a question in HKDSE 2023 relating to 3D trigonometry, involving tetrahedrons and the circumcenter of triangles.

It inspires us to extend our knowledge on centers of triangles in 2D. How can we construct the circumcenter and incenter of tetrahedrons in 3D?

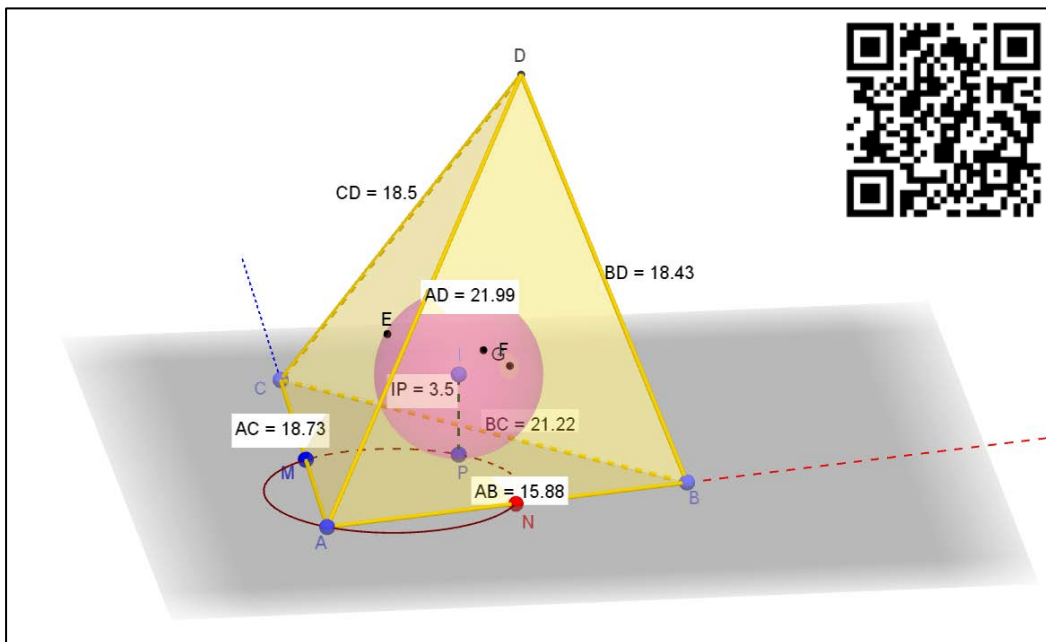

Finally, we find that it is quite easy to construct the circumcenter of tetrahedrons. But the story is totally different for the incenter of tetrahedrons. In this project, we would like to share our finding, and our journey of studying the incenter and insphere of tetrahedrons.

7. Summary

In this project, we show that the incenter of a tetrahedron is very difficult to be located by the angle bisectors between the faces of the tetrahedron. Therefore, we find another way to locate the incenter of the tetrahedron by using 3-D trigonometry instead.

Furthermore, from the work of locating the incenter of the tetrahedron, we discover a way to construct a tetrahedron with given insphere. We use the straightedge and compass construction from 2-D to 3-D and make the construction in GeoGebra 3-D calculator. It let us develop an App to help uses to construct their own tetrahedron with given insphere, with the aid of GeoGebra augmented reality (AR) technology.
